Research Summary

An automotive electric water pump is an electrically powered device that circulates coolant through a vehicle's engine to regulate its temperature. It is responsible for drawing coolant from the radiator through the engine block, cylinder head and other components, and then returning it to the radiator to be cooled before being circulated again. Electric water pumps are more efficient than traditional mechanical water pumps, as they can be controlled more precisely and run only when needed. They are commonly used in hybrid and electric vehicles, as well as high-performance racing cars.
