Research Summary

Automotive EMI (Electromagnetic Interference) Shielding involves the use of conductive materials to prevent external electromagnetic interference from affecting the performance of electronic devices and sensors in vehicles. These shields work by creating a barrier that blocks the electromagnetic waves generated by the vehicle's electrical system and other devices from interfering with each other. Automotive EMI shielding can help minimize signal interference, improving the reliability and performance of the vehicle's electronic systems. It is a critical component of modern automobiles, especially those equipped with sophisticated electronics and communication technologies.
