Research Summary

Automotive EVP or Electric Vacuum Pump is a component that is used in vehicles with hybrid or electric powertrains. It is responsible for providing vacuum pressure to the brake booster so that the driver can apply the brakes effectively. In traditional vehicles with internal combustion engines, the vacuum pressure for the brake booster is generated by the engine itself. However, in hybrid and electric vehicles, there is no engine vacuum, and hence an EVP is needed to provide the necessary brake boost. The EVP runs on electric power and helps to conserve energy by providing vacuum only when required, unlike traditional vacuum pumps that run continuously.

The major global manufacturers of Automotive EVP (Electric Vacuum Pump) include Hella, Continental, Youngshin, Tuopu Group, VIE, LPR Global, etc. The global players competition landscape in this report is divided into three tiers.
