Research Summary

Automotive glow plugs are components of a diesel engine's starting system. These are heating elements that are used to provide additional heat to the engine cylinders during cold starts. The glow plugs heat up the air in the cylinders to a high enough temperature to ignite the diesel fuel. This process helps the engine start more smoothly and quickly in cold weather. Once the engine is running, the glow plugs are turned off and the heat generated by the engine's operation maintains the temperature of the cylinders. Glow plugs are commonly found in diesel-powered vehicles and equipment such as trucks, buses, tractors.
