Research Summary

Automotive Headlight Light Distribution Control System (AHB) is a safety feature in modern cars that controls the headlight beam pattern depending on driving conditions. The system uses a camera mounted on the vehicle's windshield to monitor the road ahead and detect oncoming traffic or other vehicles in front. When the system detects oncoming traffic, it adjusts the headlight beam pattern to prevent the light from blinding the oncoming driver while still illuminating the road for the driver of the equipped vehicle. The AHB system can also adjust the headlight beam pattern when following a vehicle in front to prevent glare in their rearview mirror while still illuminating the road ahead. This feature is designed to improve overall visibility and reduce accidents caused by driver distraction or fatigue.
