Research Summary

An Automated Guided Vehicle (AGV) in the automotive industry is a type of material handling equipment that is used for transportation of goods and materials within the manufacturing facilities and warehouses. AGVs are driverless vehicles that are pre-programmed or operated remotely to transport raw materials, work-in-process parts, finished goods, and waste material from one location to another. They can navigate through the manufacturing or warehouse environments using sensors and computer-controlled technology, without the need for human intervention. In the automotive industry, AGVs are widely used for assembly line operations, parts delivery, and distribution of finished vehicles. They help in improving efficiency, reducing manpower requirements, increasing production rates, and ensuring safety in the workplace.
