### Research Summary

Automotive Intelligent Braking System (IBS) is an advanced safety feature that uses sensors, cameras, and algorithms to detect and prevent collisions. This system can apply the brakes automatically when it senses an imminent collision or when the driver fails to respond to a warning. The IBS works by calculating the distance between the vehicle and other objects or vehicles on the road. When it detects an object in the front or back, it alerts the driver with a warning signal and brakes the vehicle if necessary. The IBS can also detect pedestrians and cyclists on the road and apply the brakes to prevent accidents. This system is becoming more common in modern vehicles, and its use is expected to reduce the incidence of accidents and fatalities on the road.

The major global manufacturers of Automotive Intelligent Braking System (IBS) include Bosch, ZF, Hitachi, Continental AG, Nasn-auto, Trinova-tech, etc. The global players competition landscape in this report is divided into three tiers.
