Research Summary

Automotive lead acid battery is a rechargeable battery used in vehicles to provide electrical energy to start the engine, power the lights, radio, and other electrical components. They are called lead-acid batteries because they use lead plates and sulfuric acid to generate electricity. The battery is made up of cells, each containing a positive and negative plate submerged in an electrolyte solution. When the battery is charged, the lead plates oxidize and release electrons, which then flow through an external circuit to power the vehicle's electrical system. When the battery is discharged, the negative plates give up electrons, which react with sulfuric acid to form lead sulfate and water. Recharging the battery reverses this process, restoring the lead plates to their original condition. Automotive lead acid batteries are durable, affordable, and reliable, making them a popular choice for powering vehicles.

The major global manufacturers of Automotive Lead Acid Battery include Clarios, Tianneng Power, GS Yuasa, Chaowei Power, Exide Technologies, Leoch, Camel, Narada Power, EnerSys, Fengfan, Amara Raja, Sebang, Hankook AtlasBX, Furukawa,
