Research Summary

An automotive lift is a piece of equipment used in car repair shops and garages to raise and lower vehicles for maintenance and repair work. Automotive lifts typically consist of a base with four legs that are connected to a hydraulic system. The hydraulic system is controlled by a foot pedal or electrical motor, which raises and lowers the lift platform. The lift platform has ramps or arms that hold the vehicle securely in place while it is being worked on. Automotive lifts come in many different sizes and shapes to accommodate different types of vehicles.
