Research Summary

Automotive Night Vision Systems, also known as Night Vision Assist (NVA) or Night Vision Camera (NVC), are a type of advanced driver assistance system (ADAS) that helps drivers to see more clearly in low-light or dark conditions. These systems use infrared cameras and sensors to detect thermal energy emitted by objects, pedestrians, and animals on the road. The images captured by the cameras are then displayed on a screen or head-up display in the driver's field of view, allowing them to see potential hazards that may be difficult to see with traditional headlights. Some systems also include warnings or alerts to help drivers avoid collisions. Automotive Night Vision Systems can improve safety in low-light conditions and are particularly useful in rural or remote areas with poor lighting or high populations of wildlife.

The major global manufacturers of Automotive Night Vision Systems include Autoliv, Bosch, Delphi, Protruly, Visteon, Guide Infrared, Valeo, etc. The global players competition landscape in this report is divided into three tiers.
