Research Summary

Automotive parking radar is a system equipped in cars to assist drivers in parking their vehicles safely and accurately. It uses ultrasonic sensors to detect the distance between the car and nearby obstacles, such as walls, poles, cars, and pedestrians. When the car gets too close to an obstacle, the parking radar emits warning signals to alert the driver to stop or maneuver the vehicle. Some parking radar systems also provide visual guidance using LED displays or camera images to show the driver the vehicle's position and direction. This technology has become increasingly popular in cars as it reduces the risk of accidents and makes parking in tight spaces easier and more efficient.

The major global manufacturers of Automotive Parking Radar include Bosch, Denso, Fujitsu Ten, Continental, Autoliv, Delphi, Valeo, Hella, ZF, etc. The global players competition landscape in this report is divided into three tiers.
