Research Summary

Automotive PVC and PU Leather are synthetic materials used for car upholstery. PVC stands for Polyvinyl Chloride, and PU stands for Polyurethane. Both materials are durable and easy to clean, making them ideal for car interiors. PVC leather is made by coating a layer of PVC onto a fabric backing, while PU leather is created by applying a layer of polyurethane to a fabric backing. Both materials can mimic the look and feel of genuine leather, but are more affordable and environmentally friendly. PU leather is considered more luxurious than PVC leather due to its softer texture and more natural appearance.
