Research Summary

An automotive resettable PPTC (Polymeric Positive Temperature Coefficient) fuse is a protective component designed to limit excessive current in a vehicle's electrical circuit by increasing its resistance sharply when overheated, effectively reducing the current flow. Unlike traditional fuses that must be replaced after tripping, a PPTC fuse automatically resets itself once the fault condition clears and the device cools down. This self-resetting feature makes it ideal for protecting systems like power windows, infotainment units, and USB ports, offering both reliability and convenience in automotive applications where space is limited and maintenance access may be difficult.

The major global manufacturers of Automotive Resettable PPTC Fuse include Littelfuse, Bel, Bourns, Eaton, Onsemi, Schurter, YAGEO, etc. The global players competition landscape in this report is divided into three tiers.
