Research Summary

An automotive stabilizer bar, also known as a sway bar, is a component of a vehicle's suspension system that helps to reduce body roll during cornering or abrupt maneuvers. It consists of a rigid metal bar that is mounted at both ends to the suspension system. The stabilizer bar is designed to resist the twisting forces that occur when a vehicle undergoes turns or movements that cause weight transfer from one side of the vehicle to the other. By reducing body roll, the stabilizer bar helps to improve the vehicle's handling and stability, making it safer and more comfortable to drive.
