Research Summary

An automotive tailgate kick sensor is a feature in some cars that allows the driver to open or close the trunk or tailgate by simply kicking their foot under the rear bumper. This feature is especially useful when the driver's hands are full or when they don't have easy access to the key fob. The sensor uses a combination of sensors, cameras, and other technology to detect the driver's foot and then trigger the tailgate to open or close automatically. Some vehicles equipped with this feature also have adjustable settings that allow the driver to change the height at which the tailgate will open, making it easier to reach for different individuals.
