Research Summary

An Automotive ToF (Time of Flight) Driver IC is a semiconductor device that controls and drives ToF sensors in automotive applications. ToF sensors use laser or LED pulses to calculate the distance of objects from the sensor based on the time it takes for the light to reflect off the object and return to the sensor. Automotive ToF Driver ICs manage the power and timing of the laser or LED pulses, as well as the processing of the data generated by the sensor. These ICs are used in advanced driver assistance systems (ADAS) and autonomous vehicles for applications such as adaptive cruise control, lane departure warning, and pedestrian detection.
