Research Summary

An automotive transmission filter is a device that is located within the transmission system of a vehicle. Its main function is to remove contaminants and impurities from the transmission fluid that flows through the system. These filters are typically made of a pleated paper or synthetic material that traps tiny particles, preventing them from circulating through the transmission and causing damage. A clean transmission filter ensures that the transmission fluid remains free of contaminants, allowing the gears and other internal components to operate smoothly. Regular replacement of the transmission filter is recommended as a part of routine maintenance to keep the transmission system in good condition.

The major global manufacturers of Automotive Transmission Filter include Mann-Hummel, MAHLE, Cummins Filtration, Toyota Boshoku, Fram, Filtration, Donaldson, Parker Hannifin, AC Delco, Freudenberg, Hengst, Febi Bilstein, Sure Filter Technology, etc. The global players competition landscape in this report is divided into three tiers.
