### Research Summary

An Automotive Venting Membrane is a type of membrane that is used in automotive applications to maintain the pressure balance inside the vehicle. It is typically made of a breathable and waterproof material that allows the free flow of air and gases in and out of the vehicle while preventing water from entering. The membrane is installed in strategic locations such as the fuel tank, battery housing, and other enclosed spaces in the vehicle to prevent the buildup of pressure, heat, and moisture. The use of venting membranes helps to improve the overall safety, performance, and longevity of the vehicle.
