### Research Summary

Automotive wheel balancing weight is a weight specifically designed to balance the tire and wheel assembly to ensure that it rotates evenly. It is attached to the wheel in areas that require extra weight to create a balanced and smooth ride. Wheel balancing weights may be made of various materials such as steel, zinc, or lead, and come in different shapes and sizes depending on the type and size of the wheel. The weight is typically applied to the rim of the wheel in either clip-on or adhesive form. Proper wheel balancing helps improve tire wear, handling, and overall vehicle stability.
