### Research Summary

Autonomous ships, also known as ?unmanned ships? or ?robotic ships?, are vessels that operate without a crew onboard. Instead, they are controlled remotely or through advanced artificial intelligence and sensors. These vessels can perform a variety of tasks, such as transportation, surveillance, research, and exploration. Advancements in technology like machine learning, AI, and sensors have made it possible to develop highly sophisticated autonomous systems that can navigate through challenging sea conditions and perform various operations without human intervention. Autonomous ships are expected to transform the shipping industry by reducing costs, increasing efficiency, and reducing the risk of accidents caused by human error.

The major global manufacturers of Autonomous Ships include Kongsberg, Rolls-Royce, ASV, DARPA, NYK Line, Mitsui O.S.K. Lines, HNA Group, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate

significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
