Research Summary

Autonomous vehicles, also known as self-driving cars, are vehicles equipped with advanced sensors, cameras, radar, and artificial intelligence (AI) systems that enable them to navigate and operate without human intervention. These vehicles use technologies such as machine learning, computer vision, and real-time data processing to detect their surroundings, make decisions, and execute driving tasks, including steering, accelerating, braking, and route planning. Autonomous vehicles aim to improve safety, efficiency, and convenience by reducing human error, optimizing traffic flow, and providing mobility solutions for individuals unable to drive. They are being developed for applications ranging from personal transportation to logistics and public transit, with varying levels of autonomy classified from Level 0 (no automation) to Level 5 (fully autonomous).

The major global manufacturers of Autonomous Vehicles include Alphabet (Google), Tesla, Aurora, BMW, Ford Motor, Navya, Daimler, BYD, Baidu, Beijing Xiaoju Technology, etc. The global players competition landscape in this report is divided into
