Research Summary

Autoradiography films are photographic films that are used in autoradiography, a technique that allows the detection and visualization of radioactive molecules, cells or tissue sections. These films are coated with a thin layer of emulsion that contains silver halide crystals and other substances that make them sensitive to radiation. When radioactive particles or rays interact with the emulsion, they cause the formation of a latent image that can be developed by a chemical process. Autoradiography films are commonly used in molecular biology, biochemistry, pharmacology, and medical research to study the localization, expression, and metabolism of radiolabeled molecules.

The major global manufacturers of Autoradiography Films include Carestream, GE Healthcare, Fujifilm, Thermo Fisher Scientific, Santa Cruz Biotechnology, MIDSCI, Diamed, LabScientific, Harvard Bioscience, etc. The global players competition landscape in this report is divided into three tiers.
