Research Summary

Auxiliary Power Units (APU) are small, self-contained engines used on aircraft to provide power to the aircraft systems while the main engines are shut down. They are typically used when the aircraft is on the ground, but can also be used in-flight in case of an emergency. APUs provide power for systems such as air conditioning, lighting, and navigation equipment, as well as other essential functions such as starting the main engines and generating electricity. They are designed to be fuel-efficient and produce less noise and emissions than the main engines they supplement.

The major global manufacturers of Auxiliary Power Units (APU) include Honeywell Aerospace, United Technologies, Safran, Jenoptik, Kinetics, Dewey Electronics, The Marvin Group, Aerosila, Thermo King, Carrier ComfortPro, Green APU, Dynasys, Go Green APU, etc. The global players competition landscape in this report is divided into three tiers.
