Research Summary

An avalanche beacon is a vital safety device used by skiers, snowboarders, mountaineers, and rescue teams to locate individuals buried under snow during an avalanche. These compact, battery-powered devices transmit and receive radio signals, enabling rescuers or nearby users to pinpoint the location of a buried person quickly. Modern avalanche beacons often feature digital displays, multiple burial search capabilities, and directional indicators to enhance search efficiency. Used in conjunction with avalanche probes and shovels, these devices significantly improve survival chances by reducing the time required for recovery in life-threatening situations. Proper training and practice are essential for effective use of avalanche beacons in emergencies.
