Research Summary

An avalanche photodetector (APD) module is a highly sensitive optical sensor designed to detect and amplify low levels of light using the avalanche multiplication effect. It consists of an APD chip, a high-voltage power supply, and signal processing electronics, all integrated into a compact module. When photons strike the APD, they generate electron-hole pairs, which are then multiplied through an internal high-field region, significantly boosting the signal. This makes APD modules ideal for applications requiring high-speed, low-light detection, such as fiber optic communication, LiDAR, biomedical imaging, and scientific instrumentation. Their ability to achieve high gain with minimal noise makes them superior to conventional photodiodes in low-light environments, ensuring accurate and efficient photon detection.

The major global manufacturers of Avalanche Photodetector Module include Licel, Thorlabs, Hinds, Laser Components, Hamamatsu, Guilin Guangyi Intelligent Technology, Beijing Conquer Technology, Wuhan Guangshi Technology, Kongtum (Shanghai) Science & Technology, Shanxi Intelligent Sensing Light, etc. The global
