### Research Summary

Axial flow compressors are a type of compressor used in gas turbines to compress and accelerate incoming air or gas flow. They work by using a series of rotating airfoils or blades mounted on a rotor and stationary stators that guide the air or gas along an axial path. As the air moves through the compressor, it is compressed and its velocity is increased, which increases the pressure and temperature of the air or gas, allowing for efficient combustion in the combustion chamber. Axial flow compressors are commonly used in aviation, power generation, and industrial processes.

The major global manufacturers of Axial Flow Compressors include MAN SE, Xi'an Shaangu Power, GE, Siemens, Elliott Group, Mitsui E&S Group, Shenyang Blower Works, etc. The global players competition landscape in this report is divided into three tiers.
