Research Summary

An axle counter is an electronic device that is used to detect the presence or absence of trains on a particular section of railway track. It consists of two or more sensors that are installed at either end of the section of track being monitored. When a train passes over the sensors, the axle counter registers the movement of each individual axle and keeps track of how many axles have entered and exited the monitored section of track. This information is used to ensure the safety and efficiency of train operations, as it allows railway operators to know where trains are located at all times and to avoid collisions or other incidents.

The major global manufacturers of Axle Counter include Siemens, Voestalpine, Thales, Frauscher, Alstom, CRCEF, Scheidt & Bachmann, Keanda Electronic Technology, Consen Traffic Technology, PINTSCH, Splendor Science & Technology, CLEARSY, ALTPRO, etc. The global players competition landscape in this report is divided into three tiers.
