Research Summary

Azoxystrobin is a synthetic fungicide belonging to the class of strobilurins, used to control a wide range of plant diseases caused by fungal pathogens. It acts by inhibiting respiration in the fungal cells, thus disrupting their growth and reproduction. It is commonly used on crops such as cereals, fruits, vegetables, ornamentals, and turf, and has been found to be effective against a variety of fungal diseases, including powdery mildew, leaf spot, rust, and blight. However, due to its potential impact on human health and the environment, the use of azoxystrobin is regulated in many countries.
