Research Summary

Backwash filters are a type of water filtration system that removes impurities from water by passing it through a filtering media bed. These filters work by forcing water through the media, trapping particles, dirt, and contaminants, which are then removed when the filter is backwashed. During the backwashing process, water is passed through the filter media in the opposite direction, dislodging the trapped particles and flushing them out of the system. Backwash filters are commonly used in residential, commercial, and industrial applications to remove impurities, improve water quality, and prevent clogs or damage to downstream equipment.

The major global manufacturers of Backwash Filters include Pall Corporation, Lenzing Technik, Eaton, MAHLE, Degremont Technologies, SPX FLOW, NETAFIM, PEP Filter, Wuxi YNT, WesTech, Durco Filters, Hydrotec, Changzhou Peide, Tiefenbach, Gongzhou Valve, Shanghai LIVIC, etc. The global players competition landscape in this report is divided into three tiers.
