Research Summary

Balanced-armature magnetic speakers are a type of speaker system that utilizes a balanced-armature driver to convert an electrical signal into sound waves. The speaker consists of a small coil of wire surrounded by a permanent magnet, which is suspended in a magnetic field. When an electrical signal is applied to the coil, it causes it to move back and forth in the magnetic field, which in turn sets the cone in motion and produces sound. The balanced-armature design is known for its accurate and detailed sound reproduction, making it popular in in-ear headphones and high-end earphones.

The major global manufacturers of Balanced-armature Magnetic Speakers include Knowles, Sonion, Bellsing, SYT Audio, Sony Corporation, Molex, Crillon, etc. The global players competition landscape in this report is divided into three tiers.
