Research Summary

Ballast water treatment equipment is used on ships and vessels to manage and control the quality of water that is taken in and discharged from the ship's ballast tanks. These tanks are usually filled with seawater to maintain stability and balance during loading, unloading, and in transit. Ballast water treatment equipment uses various technologies to remove or destroy harmful organisms or substances that can be present in ballast water, such as bacteria, viruses, pathogens, and invasive species. The treated water is then discharged safely into the environment without causing harm to marine ecosystems. This equipment is essential in preventing the spread of invasive species and other harmful aquatic organisms, which can have severe ecological and economic impacts on marine environments and human activities. Many countries have regulations mandating the installation of ballast water treatment equipment on ships to prevent the introduction of harmful organisms into their waters.

The major global manufacturers of Ballast Water Treatment Equipment include Alfa
