Research Summary

A baseboard heater is an electrical heating system that is designed to provide warmth to a room by using convection and radiant heating. It is usually installed in the baseboard of a wall or in the floor and operates on electricity. The system is typically composed of a metal casing containing heating elements, insulation, and a thermostat for temperature control. As the air in the room circulates around the heating elements, it is heated and rises, creating a convection current that circulates warm air throughout the room. Baseboard heaters are an effective and economical way to heat a room, especially in areas where a central heating system is not available or not practical. They are also often used as a supplementary heating source in homes and commercial buildings.

The major global manufacturers of Baseboard Heater include Glen Dimplex, Marley Engineered Products, Slantfin, King, Stelpro, Ouellet, Mestek, ASPEQ, Comfort Zone, etc. The global players competition landscape in this report is divided into three tiers.
