Research Summary

Batch etching equipment is used in semiconductor manufacturing processes to simultaneously etch multiple semiconductor wafers in a single batch. This equipment is designed to remove specific layers of material from the surface of semiconductor wafers with high precision and uniformity, allowing for the creation of intricate patterns, features, and structures on the wafers. Batch etching equipment typically utilizes a chemical etching process, where the wafers are exposed to etchant gases or liquid chemicals in a controlled environment. The etchant selectively removes material from the exposed areas of the wafers, leaving behind the desired pattern or structure. Batch etching equipment offers advantages such as high throughput, cost-effectiveness, and repeatability, making it suitable for mass production of semiconductor devices. These systems may also incorporate features such as automatic loading and unloading of wafers, precise process control, and advanced monitoring and diagnostics capabilities to ensure consistent and reliable etching performance.

The major global manufacturers of Batch Etching Equipment include KC Tech, SEMES,

SCREEN Semiconductor Solutions, Tokyo Electron Limited, Dalton, Mohite Electronic, Hitach High Tech, RENA, ULVAC, etc. The global players competition landscape in this report is divided into three tiers.
