Research Summary

Batch manufacturing and process manufacturing are both types of manufacturing operations. Batch manufacturing is the process of manufacturing a specific quantity of a product at one time, typically to meet a specific order or sales demand. This method is common in industries such as food and beverage, pharmaceuticals, and cosmetics. Process manufacturing, on the other hand, involves producing goods in large quantities through a continuous flow of production. This method is common in industries such as chemicals, oil and gas, and textiles. An ERP (Enterprise Resource Planning) system is a software used by organizations to manage their day-to-day operations, such as inventory management, accounting, and production planning. ERP systems can be tailored to specific types of manufacturing, including batch and process. A Batch Manufacturing ERP system will have features such as batch tracking, recipe management, quality control, and compliance monitoring. A Process Manufacturing ERP system will have features such as production scheduling, resource management, formula management, and product costing.
