### Research Summary

A Battery Energy Management System (BEMS) is a software-based system that is designed to optimize the performance and efficiency of battery storage systems. The primary purpose of a BEMS is to regulate the charging and discharging of batteries so that they are always charged enough to meet the required energy demand. It also protects the battery from overcharging and over-discharging by monitoring the battery's voltage, temperature, and state-of-charge. Additionally, a BEMS helps to prolong battery life by predicting future energy demand and reducing the frequency of charging and discharging. The system integrates with other energy management systems, such as solar panels, wind turbines, and energy storage devices, to reduce energy costs and ensure optimal energy supply.

The major global manufacturers of Battery Energy Management System include GE, Honeywell, Schneider Electric, Johnson Controls, Hitachi ABB, Siemens, Emerson Electric, etc. The global players competition landscape in this report is divided into three
