### Research Summary

Battery laminated film is a specialized material used in the construction of lithium-ion batteries, particularly in their packaging and insulation. It consists of multiple layers of polymer films, typically including materials like polyethylene terephthalate (PET), polypropylene (PP), and/or polyethylene (PE), which are laminated together using adhesives or heat sealing. These films are engineered to provide electrical insulation, mechanical strength, and protection against moisture and other environmental factors. Battery laminated film is crucial in preventing short circuits and ensuring the safe and efficient operation of lithium-ion batteries. Additionally, these films can be customized with features like high-temperature resistance, flame retardancy, and puncture resistance to meet the specific requirements of different battery applications, including those used in electric vehicles, consumer electronics, and energy storage systems.
