Research Summary

Beta-alanine is a naturally occurring amino acid that plays a crucial role in the synthesis of carnosine, a dipeptide found predominantly in muscle tissues. Unlike other amino acids, beta-alanine does not participate in the production of proteins but instead acts as a building block for carnosine. Carnosine acts as a buffer in the muscles, helping to regulate pH levels during high-intensity exercise and delaying the onset of fatigue. Supplementing with beta-alanine has been shown to increase muscle carnosine levels, leading to improved endurance and enhanced performance in activities that require short, intense bursts of energy. It is commonly used by athletes and fitness enthusiasts as an ergogenic aid to optimize performance and delay muscle fatigue. Beta-alanine is well-tolerated and has minimal side effects, with the only notable effect being temporary tingling or flushing sensations known as paresthesia, which subside over time.

The major global manufacturers of Beta-Alanine include Yuki Gosei Kogyo, Xinfra Pharmaceutical, Wuhan Microsen Technology, Yangzhou Baosheng Bio-Chemical, Huaheng Biotech, Haolong Biotechnology, Zhangjiagang Specom Biochemical, Huachang Pharmaceutical, ShangHai HOPE Industry, Sanhuan Chem, Shandong
