### Research Summary

Bilirubin meters, also known as transcutaneous bilirubinometers, are medical devices used to noninvasively measure the levels of bilirubin in a patient's skin or blood. These handheld devices utilize light technology to assess the concentration of bilirubin by shining a specific wavelength of light onto the skin and measuring the reflected or transmitted light. The device provides a numerical reading that indicates the bilirubin level, helping healthcare professionals monitor jaundice in newborns or assess liver function in individuals of all ages. Bilirubin meters offer a convenient and quick method for assessing bilirubin levels, reducing the need for blood tests or invasive procedures. However, it's important to note that bilirubin meters may not provide the same accuracy as laboratory blood tests and should be used in conjunction with clinical judgment and other diagnostic tools.

The major global manufacturers of Bilirubin Meters include Philips, Drager, Konica Minolta, Natus Medical, Apel, Reichert Technologies, Mennen Medical, Advanced Instruments, GINEVRI, Lowenstein, Qili Medical, AVI Healthcare, Beijing M&B, DAS,
