Research Summary

A bio-absorbable bone screw is a medical device used in orthopedic surgery to fixate bones during the healing process. Unlike traditional metallic screws, which remain in the body permanently, bio-absorbable bone screws are designed to gradually degrade and be absorbed by the body over time. These screws are typically made from biocompatible materials such as polymers, which are broken down by the body's natural processes. The advantage of using bio-absorbable bone screws is that they eliminate the need for a second surgery to remove the hardware, reducing patient discomfort and potential complications. They provide temporary stability to the fractured bone and gradually lose their mechanical strength as the bone heals and regains its strength. Bio-absorbable bone screws have been widely used in various orthopedic procedures, including fracture fixation, joint reconstruction, and ligament repair.

The major global manufacturers of Bio-absorbable Bone Screw include Smith & Nephew, Johnson & Johnson (DePuy Synthes), Arthrex, Stryker, Zimmer Biomet, SinoBiom, OrthoPedic, Teknimed, Inion, Bioretec, etc. The global players
