Research Summary

Bio-butadiene refers to butadiene produced from renewable, bio-based feedstocks rather than traditional fossil fuels. Butadiene is a key chemical used in the production of synthetic rubbers, such as styrene-butadiene rubber (SBR) and polybutadiene rubber (PBR), which are widely used in the manufacture of tires, plastics, adhesives, and other products. Traditional butadiene production relies on petrochemical sources, but bio-butadiene offers a more sustainable alternative by utilizing biomass-derived sources such as sugars, starches, or lignocellulosic materials. Various technologies, including fermentation and chemical catalysis, can be employed to convert these renewable feedstocks into butadiene molecules. The development of bio-based butadiene is part of broader efforts to reduce the environmental impact of the petrochemical industry and promote the transition towards a bioeconomy based on renewable resources.

The major global manufacturers of Bio-Butadiene include Braskem, Genomatica & Versalis, Biokemik(Biosyncaucho), LanzaTech & Invista, Global Bioenergies & Synthos, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market

share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
