Research Summary

Bio epoxy resin, also known as eco-friendly epoxy resin, is a type of resin used in various applications such as coatings, adhesives, and composites, but it is manufactured using renewable or sustainable raw materials, as opposed to traditional epoxy resins derived from petroleum-based sources. These bio-based epoxy resins are typically made from natural ingredients such as plant oils, sugars, or other renewable resources. By utilizing renewable feedstocks, bio epoxy resins reduce reliance on fossil fuels and have a lower environmental impact, including reduced carbon emissions and energy consumption during production. Despite being derived from natural sources, bio epoxy resins retain similar properties to conventional epoxy resins, including excellent adhesion, strength, and chemical resistance. They are increasingly used in industries such as construction, automotive, aerospace, and marine, where sustainability and environmental concerns are becoming increasingly important.

The major global manufacturers of Bio Epoxy Resin include Sumitomo, Gougeon Brothers, Wessex Resins, COOE (Change Climate), ATL Composites, Bitrez, etc. The

global players competition landscape in this report is divided into three tiers.
