### Research Summary

Bioactive glass is a type of glass that has the ability to bond with living tissues and promote biological activity. It is composed of a combination of inorganic compounds, primarily silicon dioxide (SiO<sub>2</sub>), calcium oxide (CaO), phosphorus pentoxide (P<sub>2</sub>O<sub>5</sub>), and sodium oxide (Na<sub>2</sub>O). The unique characteristic of bioactive glass is its ability to form a strong bond with both hard and soft tissues in the body. When placed in contact with living tissues, bioactive glass initiates a series of chemical reactions at its surface, leading to the formation of a layer of hydroxyapatite. Hydroxyapatite is a mineral that is naturally present in bone and teeth, making it compatible with the body's tissues. The formation of hydroxyapatite on the surface of bioactive glass promotes the integration of the glass material with the surrounding tissues, allowing for better healing and regeneration. This bioactivity is particularly useful in applications such as bone grafts, dental implants, and tissue engineering, where the goal is to promote tissue growth and repair. Bioactive glass can also release certain ions, such as calcium and phosphate, into the surrounding environment. These ions can stimulate cellular activity, promote angiogenesis (the formation of new blood vessels), and enhance the body's natural

healing processes. Due to its biocompatibility and bioactivity, bioactive glass has gained attention in the field of biomaterials and tissue engineering. It offers potential advantages over traditional materials, such as metals or polymers, by providing a scaffold for tissue regeneration and facilitating the integration of artificial implants with the surrounding tissues. Research and development in bioactive glass continue to explore its potential applications in various medical fields, including bone regeneration, wound healing, and drug delivery systems.

The major global manufacturers of Bioactive Glass include SCHOTT, Johnson & Johnson (DePuy Synthes), Mo-Sci Corporation, NovaBone, Stryker, Ferro, BonAlive Biomaterials, Beijing Best Life High-tech, Noraker, Synergy Biomedical, etc. The global players competition landscape in this report is divided into three tiers.
