Research Summary

Biobased transformer oil is a type of insulating oil used in electrical transformers that is derived from renewable biomass sources instead of petroleum-based feedstocks. Transformer oil is critical for the efficient operation and insulation of electrical transformers, providing cooling, electrical insulation, and protection against arcing. Biobased transformer oil is typically produced from vegetable oils or esters obtained from renewable biomass feedstocks. These feedstocks undergo a refining and purification process to remove impurities and enhance the performance of the oil. The resulting biobased transformer oil is designed to have similar electrical and thermal properties as conventional transformer oils. The use of biobased transformer oil offers several environmental benefits. It reduces reliance on fossil fuels, decreases carbon emissions, and contributes to the development of a more sustainable and eco-friendly electrical industry. Biobased transformer oil has a lower environmental impact throughout its life cycle compared to traditional petroleum-based oils. Biobased transformer oil exhibits similar performance characteristics to conventional transformer oils. It provides excellent electrical insulation properties, high thermal stability, and

efficient heat dissipation. It can effectively transfer heat generated during transformer operation and protect against electrical breakdown, ensuring the reliable and safe functioning of transformers. The application of biobased transformer oil aligns with sustainability goals and environmental regulations. It offers an alternative to petroleum-based transformer oils, reducing the potential for environmental contamination in the event of spills or leaks. Biobased transformer oil is also compatible with existing transformer equipment, requiring no significant modifications or additional maintenance procedures. Research and development efforts continue to focus on optimizing the production processes and improving the properties of biobased transformer oil. This includes developing new feedstocks, refining techniques, and ensuring compatibility with a wide range of transformer designs and operating conditions. The utilization of biobased transformer oil supports the transition to a more sustainable and environmentally friendly electrical infrastructure. It contributes to reducing greenhouse gas emissions, promoting the use of renewable resources, and enhancing the overall sustainability of the electrical power sector.

The major global manufacturers of Biobased Transformer Oil include M&I Materials Limited, Shell, Sinopec, Savita Oil, Raj Petro Specialties, Cargill, etc. The global players competition landscape in this report is divided into three tiers.
