Research Summary

Biodegradable copolyesters are a class of polymers that are designed to degrade naturally under specific environmental conditions. These materials are synthesized by combining different monomers to form a copolymer structure, which imparts the desired properties and biodegradability. Biodegradable copolyesters offer an environmentally friendly alternative to conventional plastics, as they can break down into simpler components through biological processes, such as enzymatic or microbial action, and eventually be assimilated back into the environment. These materials can be used in various applications, including packaging, agricultural films, disposable utensils, biomedical devices, and other single-use plastic items, where the goal is to reduce environmental impact and promote sustainability. Examples of biodegradable copolyesters include polylactic acid (PLA), polybutylene succinate (PBS), and polyhydroxyalkanoates (PHAs).

The major global manufacturers of Biodegradable Copolyesters include Basf, Eastman, Showa Denko, DuPont, Kingfa, Mitsubishi Chemical, Meredian, Tianjin GreenBio
