Research Summary

Biodegradable lubricants, also known as environmentally friendly lubricants or eco-friendly lubricants, are lubricating substances that are formulated to minimize environmental impact and biodegrade safely and rapidly after use. These lubricants are typically derived from renewable resources such as vegetable oils, animal fats, or synthetic esters, rather than petroleum-based sources. They are designed to offer comparable performance to conventional lubricants while being less harmful to the environment. Biodegradable lubricants are used in a variety of applications, including automotive, industrial, marine, and agricultural machinery, where minimizing environmental contamination and meeting regulatory requirements are essential. By choosing biodegradable lubricants, businesses and consumers can reduce their ecological footprint and contribute to sustainable practices while maintaining equipment performance and longevity.
