### Research Summary

Biodegradable plastic bags and sacks are a type of packaging that are designed to break down and decompose naturally in the environment. They are typically made from biodegradable materials, such as plant-based polymers or bioplastics, that can undergo degradation through biological processes like microbial activity or exposure to sunlight, heat, and moisture. Biodegradable plastic bags and sacks offer an environmentally friendly alternative to traditional plastic bags, which can persist in the environment for a long time and contribute to pollution. When disposed of properly, biodegradable plastic bags can break down into harmless substances, such as water, carbon dioxide, and biomass, leaving behind minimal residue. However, it is important to note that the biodegradation process may vary depending on the specific material and environmental conditions. Proper disposal methods, such as composting or utilizing designated waste management systems, are crucial to ensure the effective biodegradation of these bags and minimize their environmental impact.

The major global manufacturers of Biodegradable Plastic Bags and Sacks include BioBag, Novolex, EnviGreen, BASF, Plastiroll, Sahachit, Xtex Polythene, RKW Group, Abbey Polythene, Sarah Bio Plast, Bulldog Bag, Symphony Polymers, Jiangsu Torise biomaterials, JUNER Plastic packaging, etc. The global players competition landscape in this report is divided into three tiers.
