Research Summary

Bioethanol, also known as ethanol or ethyl alcohol, is a renewable biofuel produced from biomass sources. It is primarily derived from agricultural crops such as sugarcane, corn, wheat, or other feedstocks rich in carbohydrates. The production process involves fermentation, where the carbohydrates are converted into ethanol by the action of microorganisms, typically yeast. The resulting bioethanol can be used as a fuel additive or as a standalone fuel in various applications, including transportation, power generation, and industrial processes. Bioethanol is considered a renewable fuel source as the feedstocks used in its production can be grown and replenished, unlike fossil fuels. It offers advantages such as reduced greenhouse gas emissions, improved air quality, and decreased dependence on non-renewable energy sources. However, it is important to consider the sustainability of feedstock production and potential impacts on food availability and prices when utilizing bioethanol as a fuel source.

The major global manufacturers of Bioethanol include POET, ADM (BioUrja Group), Green Plains, Valero Energy, Tereos, Ra?zen, Alto Ingredients, The Andersons, Sekab,

Pannonia Bio, BP, Big River Resources, Aemetis, CropEnergies, White Energy, COFCO, SDIC Bio, CHS Inc, Alcogroup, Ace Ethanol, Envien Group, Essentica, etc. The global players competition landscape in this report is divided into three tiers.
