Research Summary

Biogas is a renewable energy source produced through the anaerobic digestion of organic materials such as agricultural waste, food waste, or sewage. It is composed mainly of methane and carbon dioxide, along with trace amounts of other gases. Biogas can be utilized for various applications such as electricity generation, heating, and cooking. Biomethane, on the other hand, is a purified and upgraded form of biogas that has undergone a purification process to remove impurities and increase the methane content. It has properties similar to natural gas and can be used as a substitute for fossil fuels in applications like vehicle fuel or injected into natural gas pipelines for distribution. Biogas and biomethane are valuable sources of renewable energy, reducing greenhouse gas emissions and providing sustainable solutions for waste management and energy production.

The major global manufacturers of Biogas and Biomethane include Gasrec, Future Biogas, VERBIO, Thorso Biogas, Staples Vegetables, Nature Energy, Asia Biogas, Deqingyuan, Mengniu, Shandong Minhe, J V Energen, AltEnergo, etc. The global
