Research Summary

Biogas is a renewable energy source produced through the anaerobic digestion or fermentation of organic materials such as agricultural waste, food waste, sewage, or dedicated energy crops. It is composed mainly of methane (CH₄) and carbon dioxide (CO₂), with trace amounts of other gases such as hydrogen sulfide (H₂S) and nitrogen (N₂). Biogas can be harnessed and used as a fuel for various applications, including electricity generation, heating, cooking, and transportation. It is considered a sustainable energy option as it utilizes organic waste that would otherwise contribute to greenhouse gas emissions through decomposition. Biogas production not only provides a renewable energy source but also offers additional benefits such as waste management, reduction of odor and pollution from organic waste, and the production of nutrient-rich digestate that can be used as organic fertilizer. Furthermore, biogas can be upgraded to biomethane, a high-quality methane fuel that can be injected into natural gas pipelines or used as a vehicle fuel, further expanding its potential applications and environmental benefits.

The major global manufacturers of Biogas include Bebra Biogas, Schmack Carbotech,

Mt-Energie, Pentair Haffmans, Firmgreen., Hamworthy, EnviTec Biogas, Eisenmann, Greenlane Biogas, K?hler & Ziegler, Mainsite Technologies, Dmt Environmental Technology, ETW Energietechnik, Malmberg Water, Gastechnik Himmel, Bilfinger EMS, Guild Associates, BMF HAASE Energietechnik, Econet, etc. The global players competition landscape in this report is divided into three tiers.
