Research Summary

A biological sensor, also known as a biosensor, is a device that utilizes biological elements or systems to detect and measure specific biological or chemical substances. It combines a biological recognition element, such as enzymes, antibodies, or nucleic acids, with a transducer that converts the biochemical signal into an electrical or optical output. The biological recognition element interacts with the target analyte, causing a measurable change in the transducer's signal, which can be quantified and interpreted. Biological sensors have a wide range of applications, including medical diagnostics, environmental monitoring, food safety testing, and bioprocess monitoring. They offer advantages such as high specificity, sensitivity, and rapid response, making them valuable tools in various fields where the detection and monitoring of biological or chemical substances are critical.

The major global manufacturers of Biological Sensor include Abbott, Platinum Equity, Nova Biomedical, Bayer, Roche, ARKRAY, Medtronic, B.Braun, Sinocare, Yicheng, Yuyue Medical, etc. The global players competition landscape in this report is divided
